December 2004 Report Card on Retail Competition

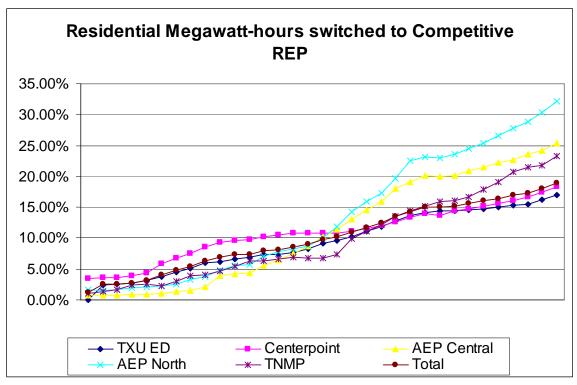

Competitive Marketplace

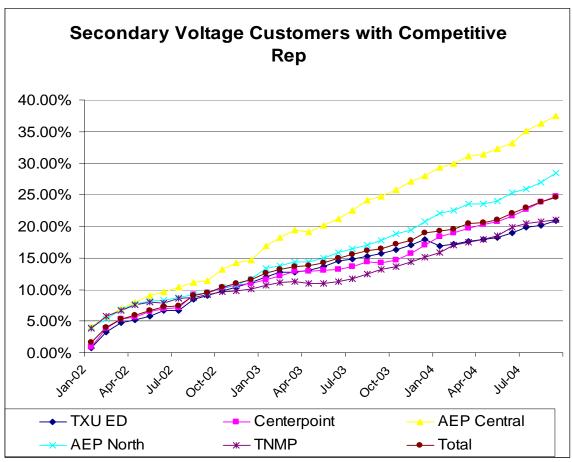

Since the opening of the market in January 2002, competitive market share has steadily increased. As of September, 2004, competitive REPs accounted for approximately 18% of residential customers, representing over 18.9% of residential load. Among customers served at secondary voltage, consisting of most commercial and some small industrial customers, over 24.6% of customers representing 46.9% of all load have switched to competitive providers.

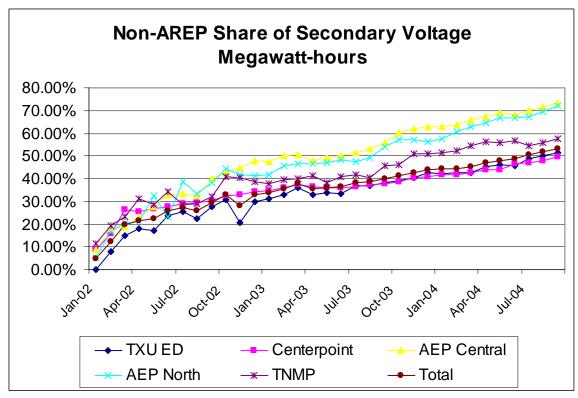

Approximately 42% of primary or transmission customers have switched, representing over 69% of the large industrial load. Competition has also appeared in the lighting segment of the market in the AEP Central, AEP North and TNMP territories, with over 20% of lighting load having switched in those territories.

The AEP Central (CPL) and AEP North (WTU) territories have seen the most switching to competitive providers, but all 5 major territories are seeing a steady rise in competitive providers' market shares.

System Benefit Fund

T&D Service Area	# of Customers receiving discount	\$ of Discounts Disbursed in October 2004
